
4. Phylum Spirochaetes

4. Phylum Spirochaetes

4. Phylum Spirochaetes

Gram negative

Aquatic environments; some pathogens

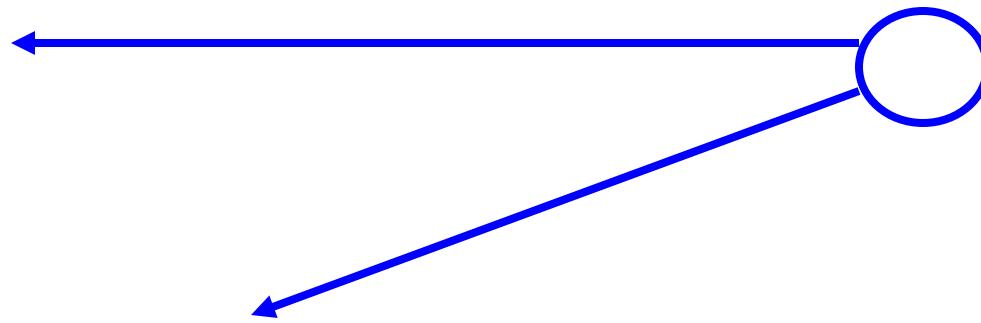

Unique morphology. Endoflagella

4. Phylum Spirochaetes

Treponema: animal and human hosts, microaerophilic, very sensitive to environmental stress

T. pallidum: syphilis

5. Phylum Bacteroidetes

5. Phylum Bacteroidetes

5. Phylum Bacteroidetes

Gram negative

Complex substrates

Habitats: digestive tract, hypersaline environments, water and soil

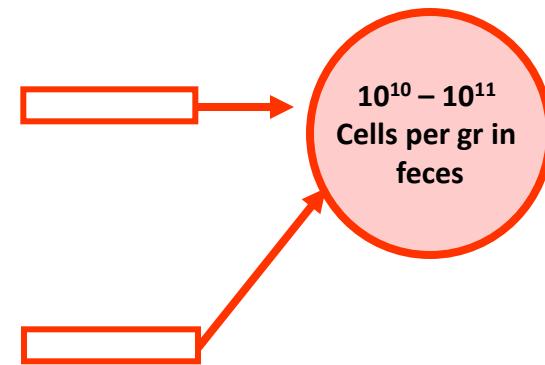

Genus *Bacteroides*

Rods, strict anaerobes

Fermentative

Gut comensals

Pathogens

5. Phylum Bacteroidetes

Rumen microbiota

Rumen metabolism

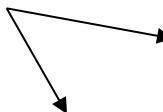

5. Phylum Bacteroidetes

Cytophaga

Abundant in soils and waters

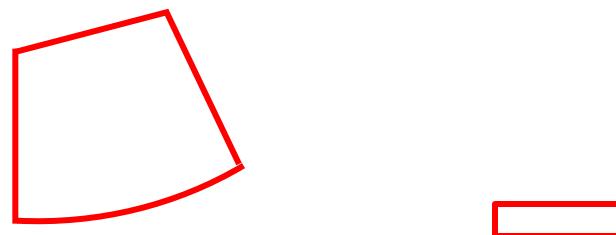

Many species degrade cellulose, chitine and/or agar

Fish pathogens

6. *Phylum Actinobacteria*

6. *Phylum Actinobacteria* High GC Gram POSITIVES

6. Phylum Actinobacteria

Gram positive

***Corynebacterium* → *C. diphtheriae* (Diphtheric toxin)**

Anaerobic facultative rods

BBE

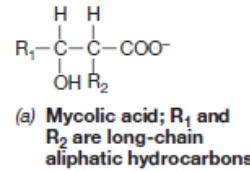

Saprophytic and pathogenic

DIFTERIA

pseudomembrane

6. Phylum Actinobacteria

Mycobacterium

Acid fastness

Mycolic acids

Ziehl-Neelsen staining

6. Phylum Actinobacteria

Mycobacterium tuberculosis

(Koch's bacillus) TUBERCULOSIS

MULTIDRUG RESISTANT TB!!!

BBE

6. Phylum Actinobacteria

***Mycobacterium tuberculosis* TUBERCULOSIS**

BBE

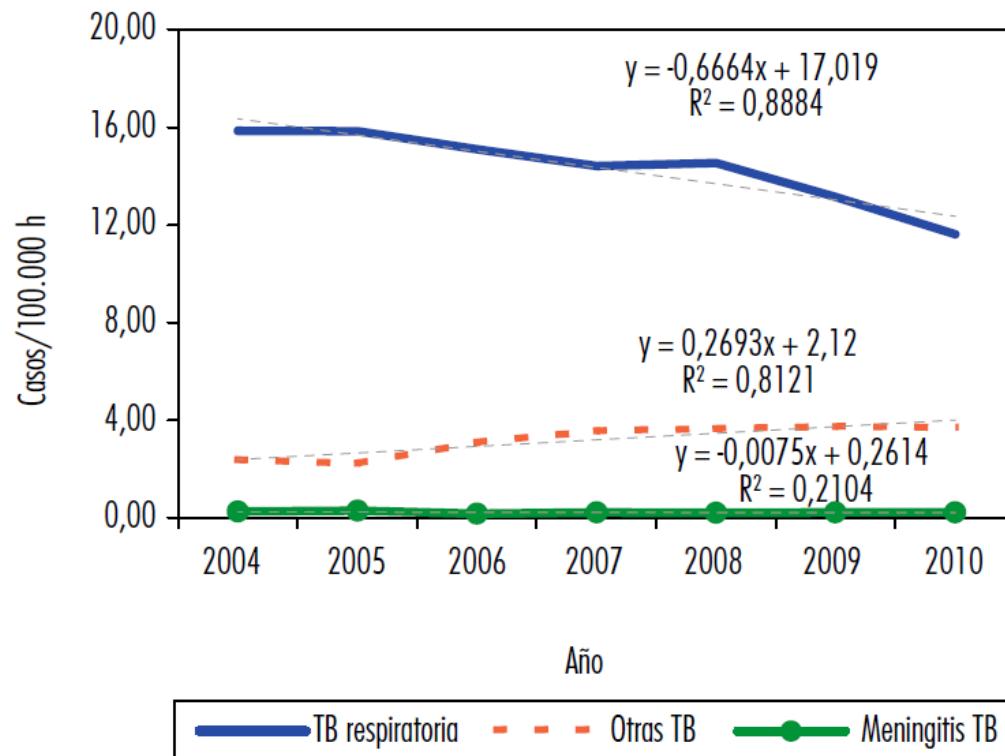

Tubercles

Tuberculin test

Tuberculosis

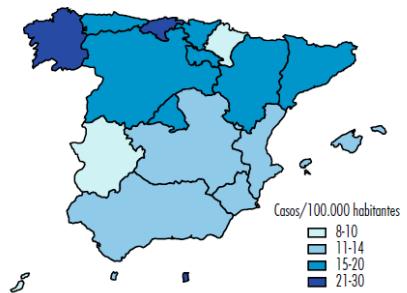

SIDA

Figura 1. Tasas de tuberculosis según categorías de declaración. España, 2004-2010

Fuente: Red Nacional de Vigilancia Epidemiológica
Elaboración: Centro Nacional de Epidemiología

Figura 2. Tasas de incidencia de tuberculosis por Comunidades Autónomas, 2010.

6. Phylum Actinobacteria

***Mycobacterium leprae* LEPROSY (Hansen's disease)**

Tuberculoid leprosy

Lepromatous leprosy

BBE

6. Phylum Actinobacteria

Streptomyces

Filaments without cross-walls

Mycellium and spores (conidia - no endospores)

G+C range: 63-78% (the highest)

> 500 species, soil microbiota

Pigments / geosmines

Chemoorganoheterotrophic aerobes

Antibiotic producers

Género *Streptomyces*

Mycelium

Spore-bearing
structures

Spore
formation

6. Phylum Actinobacteria

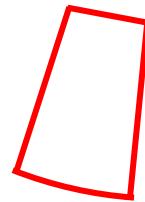

Streptomyces: antibiotic production

Soil sample

7. Phylum Chlamydiae

7. Phylum Chlamydiae

Gram negatives

Obliged intracellular parasites

No PG (genes present)

“Energetic parasites” (ATP) (genes present)

Transmission: Air and direct contact

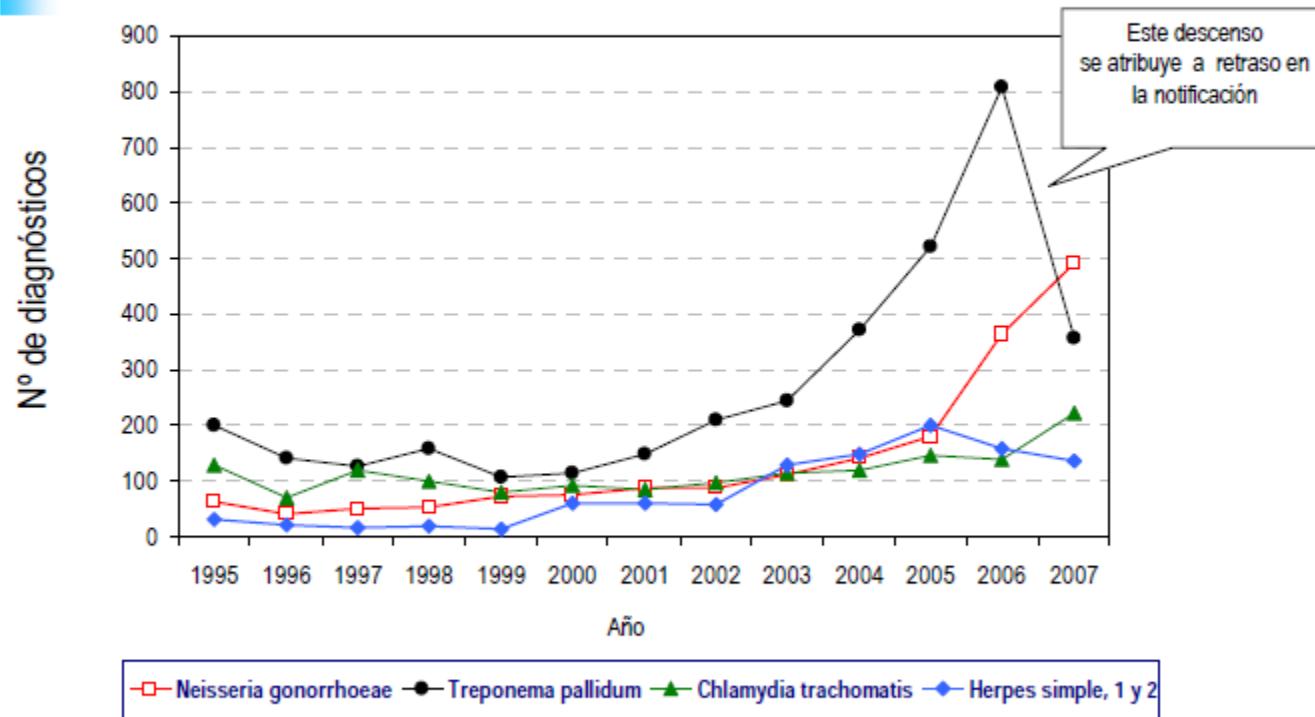

Elementary body: **chlamydiospore**

7. Phylum Chlamydiae

NGU, very high incidence

Diagnósticos microbiológicos de infecciones de transmisión sexual. España 1995-2007
